Hydraulic Design Of Storm Sewers With A Spreadsheet

Hydraulic Design of Storm Sewers with a Spreadsheet

by Harlan H. Bengtson

Synopsis

Storm sewers are widely used to carry away stormwater runoff from storms, primarily in urban areas. The hydraulic design begins after the location of the manholes for the system have been determined. Between each pair of manholes the storm sewer will have a constant slope and diameter. The hydraulic design process results in determination of an appropriate diameter and slope for each length of storm sewer and determines the depth of the bottom of the pipe at each manhole. The overall procedure and each step are presented and discussed in this e-book. Example calculations for a single length of storm sewer between two manholes is performed and an example of calculations between successive manholes will be shown using an Excel spreadsheet.

Book Information

File Size: 1792 KB

Simultaneous Device Usage: Unlimited

Publication Date: October 16, 2016

Sold by: Amazon Digital Services LLC

Language: English

ASIN: B01MA55J8G

Text-to-Speech: Enabled

X-Ray: Not Enabled

Word Wise: Not Enabled

Lending: Not Enabled
