Customer Reviews

Ted Moores and Marilyn Mohr

There isn't a better canoe building book, period.

I don't have the means to build one, but Nick Offerman built his canoe going by this book. There's even a video series on YouTube. That's good enough for me.

Good overview of wood strip construction, a little dated however

A very informative book. I plan to build a stripper in the near future and this book supplied me with the information that I was needing and also clear step by step instructions. Very fast delivery time to receive the book also.

This is exactly what my husband was looking for! He wants to build a few canoes and this shows

you every part of how to do that!

This book has great designs and takes you through the process step-by-step. Used it to build my first canoe, and it turned out really well. I highly recommend this book, and if you follow the guidance in this book, your canoe will turn out really nicely.

There are probably six or seven different books and magazine articles that describe the building process in detail, but this is the one that is THE STANDARD and is, by far, the most interesting and complete. It includes plan dimensions for six or eight canoes, but most will spend the \$40 or so to send away for full-size plans and avoid having to loft them yourself. It is also a book that is enjoyable to browse and read even if you are not building. But after doing so, you'll get the bug and spend the next four months in your garage like I did. Very therapeutic

I have build the Redbird canoe. The book was almost perfect to help me building. Some minor details were left to my own fantasy. It was very hard to understand the special terminology and translate it (I talk and think in dutch). The result is great however. I can advise everybody who is thinking about building a strip canoe to read this book first. All issues , possible problems, step by step plans, measurements etc. are adequately handled in this book.
